

The Company

Morgan Sindall plc was formed in 1994 from the reverse takeover by William Sindall plc of Morgan Lovell.

Since then, the company has become a FTSE 250 and a top ten UK construction group with subsidiary companies operating within four divisions:- fit out, construction, affordable housing and infrastructure services.

The company has a national network of offices, employs over 5,000 people and has a turnover in excess of £2billion.

The Brief

Morgan Sindall Plc have been using Intextra3 as a Group wide Intranet solution for the past 2 years with a single Intranet used by all divisions. It became clear that not all divisions had the same requirements from an intranet and their business processes were often poles apart due to the nature of their work.

AWS were tasked with providing a solution to this problem through implementing multiple Intranets that are tailored to the business needs of each division. The key to ensuring the success is the ability for each division to search and navigate across all sites.

The Solution

Intextra® delivers knowledge sharing, latest news, key events and search to all employees across all divisions and brands. A key feature of the intranet is the People, Products and Places directory, creating a skills database for all employees and a complete database of all projects completed and the key factors involved.

Paul Whitmore, commercial director says "The intranet has turned out brilliantly and should be a major boost to the group's capabilities for many years to come. Morgan Sindall PLC, the UK's fastest growing construction company, with turnover growth of 41% and profit growth of 75% in the first 6 months of the year, have implemented Intextra as their group wide solution.
